

Navneet Kishan Srinivasan

MSc Data Science Student | Applied Machine Learning for Healthcare (Diagnostic Imaging)

MSc Data Science student focused on healthcare AI, medical imaging, and machine learning for clinical applications. Currently working in the Diagnostic Imaging Digital & Automation Platforms team at Siemens Healthineers, with experience in Python-based ML workflows and interoperable healthcare systems.

Erlangen, Deutschland

Education

- MSc in Data Science** 2025 - 2027
Friedrich-Alexander-Universität Erlangen-Nürnberg (FAU), Germany
Specialising in AI/ML
- BSc in Computer Science** 2022 - 2025
Eötvös Loránd University (ELTE), Budapest, Hungary
 - Thesis:** MedLedger: Secure Health Record System | **Grade:** 1.0
 - Awarded special mention** at the TDK Students' Scientific Conference at Siemens Mobility

Work Experience

- Diagnostic Imaging Working Student** 02/2026 - present
Siemens Healthineers, Erlangen, Germany
 - Working on data analysis and data preparation for the development of MRI Digital Twin.
 - Assisting with model development for Data analysis, identifying business insights and VR Simulation
- Programming Instructor (Python & OOP | Java)** 02/2025 - 06/2025
Eötvös Loránd University (ELTE) , Budapest, Hungary
 - Taught two undergraduate programming courses (Python & OOP/Java), delivering weekly labs for 30+ students and covering SOLID, UML, and software design.
 - Designed and graded assignments/exams and supported 140+ students with debugging and project development.
- Quantitative Developer Intern** 06/2024 - 03/2025
Citibank, Budapest, Hungary
 - Developed automated Python/FastAPI tools and pytest-based testing frameworks for distributed monitoring systems, improving data-processing reliability and performance visibility.
 - Maintained and extended internal software components (Python, MongoDB, React, REST) used by multiple stakeholder teams for capacity analysis and workflow support.
 - Worked extensively with large datasets, building performance-focused scripts and dashboards and collaborating with users to refine requirements and tool behavior.

Skills

- Python
- Machine Learning
- PyTorch
- TensorFlow
- Medical Imaging
- Image Processing
- Linux (usage/scripting)
- Docker
- Git
- SQL
- REST APIs
- OOP & Software Design
- FHIR Standards
- AI Applications (LLMs, RAG tools)
- Documentation

Languages

- English (C2)
- German (A1-A2)

Projects

MedLedger: Modular Healthcare Data-Processing Tool with Schema-Driven Models & Auditable Workflow Pipeline with Containerized Deployment

Python, FastAPI, React, HAPI FHIR, Docker, Ethereum, MongoDB, Machine Learning

- Developed a modular system deployed via Docker-based microservices, enabling reproducible environments for analysis, testing, and system-level validation.
- Designed schema-driven components and separation of concerns, supporting maintainable architecture suitable for edge or distributed setups.
- Implemented anomaly-detection routines used to assess workload behaviour, providing experience with performance-aware data pipelines.
- Worked extensively with container orchestration (Docker Compose), environment isolation, and cross-service communication.

Radiology Differential Generator: Evidence-Based RAG System

Python, LangChain, FAISS, LLM APIs

- Created an AI-assisted retrieval tool using FAISS and LLM APIs to support rapid information lookup across large datasets.
- Built preprocessing pipelines and modular components that allow users to query, filter, and summarize information efficiently.
- Developed evaluation scripts and lightweight UI components enabling interactive result inspection and workflow reliability.
